

Server Version: Apache/2.2.11 (Unix) DAV/2 mod\_ssl/2.2.11  
OpenSSL/0.9.8k PHP/5.2.9 SVN/1.6.9 mod\_apreq2-20051231/2.6.0  
mod\_perl/2.0.4 Perl/v5.10.0  
Server Built: Mar 31 2009 23:38:20

mod\_deflate enabled for output. Apache is running on mod\_prefork.

```
<IfModule prefork.c>  
StartServers 8  
MinSpareServers 10  
MaxSpareServers 20  
ServerLimit 256  
MaxClients 256  
MaxRequestsPerChild 4000  
</IfModule>
```

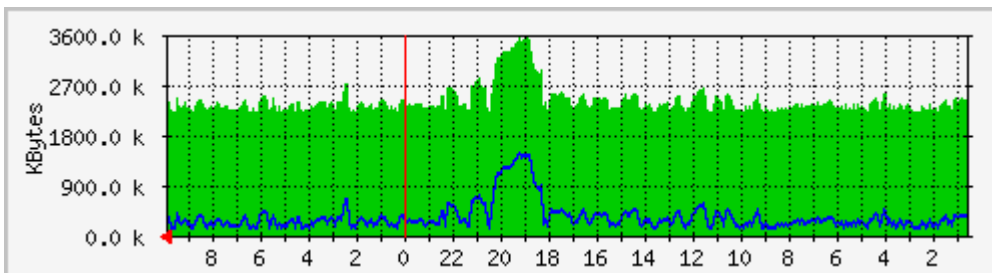

Status snapshot after 13hours run:

### Data transmitted vs. Uncompressed size

```
bash-3.2$ cat /var/log/httpd/deflate_log.tmp|awk '/[0-9]+\V[0-9]+/{print $4}'|awk  
'BEGIN{FS=" "}{SENT+=$1/1024/1024; ORIG+=$2/1024/1024} END{print  
SENT"MB "ORIG"MB - "SENT/ORIG*100"%}'
```

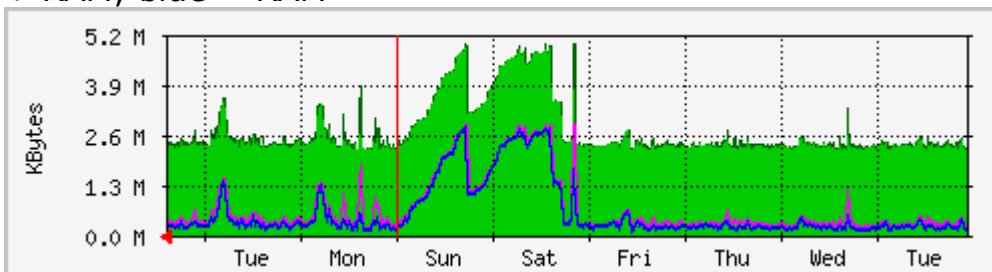

**7945.55MB** **11761.8MB** - 67.5541%

Memory **available** day level (this is *\*not\** memory usage) green = SWAP + RAM; blue = RAM

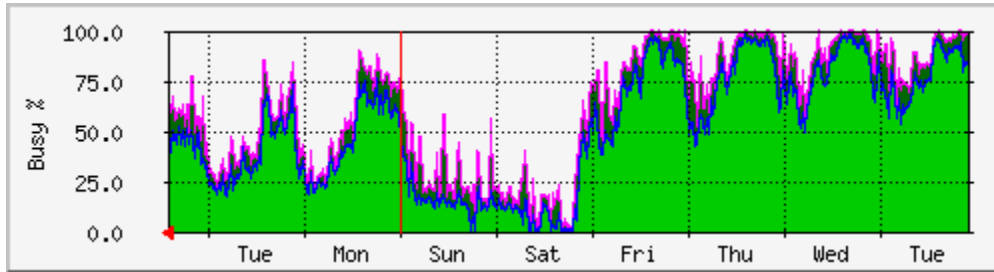

Memory usage stable, 18-20 is connected with maintenance time when all memory was available.

Memory **available**, week level (*\*not\** memory usage) green = SWAP + RAM; blue = RAM

**MEMORY - OK**

### CPU WEEK LEVEL – NORMAL/

**Apache Bytes per second on average decreased from ~230 to 176.2 KB/s**

### Apache children status

	Max	Average	Current
<b>Busy Servers:</b>	48 Workers	20 Workers	25 Workers
<b>Idle Servers:</b>	84 Workers	17 Workers	14 Workers

### Top 3 single requests:

99.0791MB	130.73MB
99.5051MB	137.569MB
99.5051MB	137.569MB
